

Ref.No. /2024-25

Date:

Settling Tank Unit

Product Description: -

Settling tank is likely a small, cylindrical tank used for separating solids from liquids through gravity settling.

Applications:

- **Small-scale laboratory processes:** Settling out precipitates from chemical reactions.
- **Primary treatment in wastewater treatment:** Separating grit and sand from wastewater before further treatment.
- **Food and beverage industry:** Settling out larger particles during juice or broth clarification.
- **Aquaculture:** Settling out uneaten food and fish waste in small aquaculture systems.

Settling Tank Unit

Technical Specifications

Sl. No.	Technical Specification
1.	20 L PP Settling Unit
2.	Zig Zag shape baffles/ better shape
3.	Input Valves with Flow Meter
4.	Level Measurement Indicator
5.	Solid/Sludge Removal Valve
